TITAN Inventory Control System provides the functionality needed to ensure your inventory data is complete, accurate and ready for your customer. This tool will create a single inventory package that you can take to the store and plug into TITAN Inventory Manager for conducting the inventory. When the inventory is complete, use TITAN Inventory Control System to make notes about the inventory, store, or customer, and to archive the package, including inventory data and results, for the next scheduled inventory.

Import Customer Validation Files

New Inventory Wizard	
Validation Data Please select the validation data for this inventory here.	<pre></pre>
Get the validation data from the database	Get From Database

Get a previous data file Choose File Previous Data Create a new previous data file Wizard. File Selected: PrevData tor 9/23/2006, 24.155 pieces, \$211,759.30 Cancel < Back Next >

INVENTORY RESOURCE FILES may include:

- SCRIPT FILES, which tell the TITAN how to collect, validate, and store the data
- VALIDATION FILES, which contain the database values against which the TITAN input is validated
- **TRANSLATION FILES**, which contain the area & SKU descriptions and other cross-referenced information to be displayed on inventory reports
- CUSTOM REPORTS, which accommodate customers with unique report specifications
- **PREVIOUS INVENTORY RESULTS**, which summarize previous inventories for comparison with the current
- CUSTOMER, STORE, AND <YOUR COMPANY'S> INFORMATION, which includes logos, addresses and contact information for use in inventory reports
- EXPORT FORMAT SPECIFICATIONS, which defines the format of the customer/store output file produced at the close of inventory
